In order to ensure a cleanly executed engraving, we would ask you to kindly send us your logo in the form of a "Vector File".

Vector file:

Your logo should be available as a vector file. File extensions are:
PDF | AI | EPS | CDR

Vector files define an image by means of geometrical figures (circles, rectangles, lines, etc.). They can be enlarged and reduced without any loss of quality, and are therefore basic prerequisites for a high quality engraving!

Difference between vector graphics | pixel graphics:

A pixel graphic is made up of individual pixels, and is usually unsuitable for use. Scaling causes a reduction of quality in pixel graphics. Almost all computer and Internet graphics are pixel graphics.
The most popular file formats are: **JPG | PNG | BMP | TIFF.**

If you are not in possession of the required data, it's still possible that we can help you. We can also create these data for you. Please contact us for a quote.
