

Water barometer

The water barometer, or "Goethe glass", shows the air pressure and therefore the coming weather. Fill the barometer as shown with distilled water and hang it somewhere indoors. If the water climbs up the spout, the weather is bad, if it comes back down again, it will be fine. Note: If the water overflows you need to add some more water straight away. Very few glass blowers have mastered the art of blowing this object to perfection.

Care recommendations (print version)

Nr.	Bezeichnung	Masse	Preis
600	Water barometer	100 x 350 mm	120.00 CHF
